

“The first question to ask is why you want to build this application?” - Chip Huyen, AI Engineering

Prompt Engineering

Prompt for Google Stitch :

Design a visually striking, interactive cultural heritage website called Birmingham Music Stories.

Visual direction, combine the feeling of:

- Archival music photography
- Old gig posters and record sleeves
- Birmingham's industrial heritage

Homepage structure:

- 1. Hero -> The title is BIRMINGHAM MUSIC STORIES
- 2. Introduction -> Explain Birmingham's musical identity
- 3. Explore Birmingham's Sounds -> Include Heavy Metal, Reggae, Rock...
- 4. Birmingham Sound Map -> Each Location will reveal the music stories
- 5. Create a timeline that shows the album's releases for each band

Interaction design:

- Hovering over story cards, music genres, and locations on the map
- Design both a polished desktop view and a clear mobile-responsive version

Interactive Demos

Beneath Birmingham: The Canal Game

Race a narrowboat against an AI-controlled rival through a stylised version of Birmingham's canals.

[Play the Canal Game](#) · [View the source code](#)

Table of Contents

1.- Designing a website in Google stitch

1.1 - Turning it into a functional website

1.2 - Refining the website

1.3 - Sending it to a Github repository

2.- Version Control on Github

2.1 - Downloading the repo

2.2 - Running the website locally

2.3 - Launching the website on Github Pages

3.- AI agents

3.1 - Setting up an IDE

3.2 - Using agents to add features

3.3 - Documentation & Skills

Prompt Engineering

Structure of a prompt:

- **Goal -> What is the objective?**
- **Context -> What does the AI need to know?**
 - **Constraints -> technical limitations, platforms, tools**
- **Content -> What should be included?**
 - **Architecture, style and ownership**
- **Success criteria -> What must work?**
 - **Behaviour, interactions and what to test**

Birmingham Music Stories

An digital exhibition exploring Birmingham's musical heritage

TECHNICAL REQUIREMENTS:

- Built entirely with HTML, CSS & vanilla JavaScript
- No frameworks, backend or databases.

CONTENT

- Stories connecting artists, genres and places across the city.
- Artists : Black Sabbath, Steel Pulse, UB40, Duran Duran, Electric Light Orchestra
- Genres: Heavy Metal, Reggae, New Wave, Bhangra, Rock & Pop.

INTERACTION

Genre filters, an interactive Birmingham sound map, expandable artist stories and a musical timeline.

Google Stitch Result

“The first question to ask is why you want to build this application?” - Chip Huyen, AI Engineering

Google AI Studio

Prompt for Google AI

Studio :

Build a complete responsive website called Birmingham Music Stories, using the attached design as the primary visual reference.

IMPORTANT TECHNICAL REQUIREMENTS:

- Build this as a simple static website using only HTML,CSS & JavaScript
- Do NOT use: React, Vue, Angular, Next.js, npm packages, Node.js, a backend, databases, external APIs

CONTENT

- Create five musical categories: Heavy Metal, Reggae, New Wave, Rock, Bhangra
- Include : Black Sabbath, Steel Pulse, UB40, Duran Duran, Electric Light Orchestra

Interactive features:

- When the visitor selects a genre, highlight the relevant music stories.
- Clicking a location should reveal a small story panel showing stories
- When a visitor clicks a featured music story, expand it or open a panel

Add short comments to the important JavaScript sections

Sending it to Github

IDE + AI Agent

VS Code

Codex

The screenshot shows the Visual Studio Code IDE interface with the AI Agent (Codex) integrated into the right sidebar. The main editor displays a JavaScript file named `main.js` for a 3D book presentation. The Explorer sidebar on the left shows the project structure, including assets, book, slides, and tests. The AI Agent interface on the right includes a chat window with a review of the current project, a list of files with their change counts, and a detailed response to a prompt about adding more slides. The terminal at the bottom shows the command to run the application.

```
js > JS main.js > ...
1 // This entry point and its static imports must stay independent of Three.js.
2 import { Presentation, DEV_MODE, presentationTitle } from "./presentation.js?v=6";
3 import { initUI } from "./ui.js?v=6";
4 import { createStartup } from "./startup.js?v=6";
5
6 const presentation = new Presentation();
7 document.title = presentationTitle;
8 document.getElementById("presentation-title").textContent = presentationTitle;
9 let startup;
10 const ui = initUI({ presentation, devMode: DEV_MODE, retry: () => startup.start() });
11 startup = createStartup({
12   presentation,
13   loadRuntime: async () => {
14     const { createScene } = await import("./scene.js?v=6");
15     return () => createScene(presentation);
16   },
17   onStatus: ui.setStartupStatus,
18 });
19 startup.start();
20 window.addEventListener("pagehide", event => {
21   if (!event.persisted) { ui.dispose(); startup.dispose(); presentation.dispose(); }
22 });
23
```

Honestly I think this is perfect how tell me how can I include more slides and update the readme. Also add a documentation folder and include the main classes and methods used as well as documentation with step by step how to add more slides, links and text

Worked for 4m 14s

To add more slides:

1. Put an upright landscape image in `assets/slides/` —16:9 works best.
2. Add a slide object inside the `slides` array in `js/presentation.js`, specifying its `src`, `title`, and optional `description` and `resources`.
3. Save and reload. The Index, numbering, and page count update automatically.

I updated the README and added:

- Step-by-step slide guide
- Adding links and copyable text

Here are key actions taken for the app:

✎ Edited 1 file

styles.css

🔧 Built

I have applied the **Warm Organic / Cultural** design theme to the **Birmingham Music Stories** exhibition:

- **Warm Cultural Palette:** Re-anchored the atmosphere in deep charcoal (#121212), warm cultural parchment text (#E4E3E0), rich ochre gold (#A6894B), and deep terracotta crimson (#7D1108) for accents and interactive callouts.
- **Editorial Typography & Hierarchy:** Paired classic display serif headlines with crisp technical metadata tags and high-legibility body typography for an archival exhibition feel.
- **Unified Visual Treatments:** Updated the navigation badges, interactive filter controls, Birmingham sound map nodes, chronology timeline milestones, story dossier panels, and archival audio player to reflect the warm cultural aesthetic while preserving all original structure and interactivity.

BIRMINGHAM MUSIC STORIES

EXHIBITION 01

STORIES

TIMELINE

SOUND MAP

ABOUT

ARCHIVE

— CURATORIAL PERSPECTIVE

"Every city has a soundtrack. This one changed music."

Birmingham's musical history was shaped by its neighbourhoods, venues, communities and changing musical movements. From the industrial metal foundries of Aston to the vibrant Caribbean sound systems of Handsworth, the city's geographical and cultural tapestry sparked global revolutions in sound.

Rather than a single genre, Birmingham has been an incubator for diverse cultural collisions — where post-war manufacturing rhythms met Jamaican reggae, where South Asian dhol collided with electronic synthesizers, and where art-school experimentalism birthed the New Romantic movement.

AI agent - include photos

Prompt for Codex :

Review this entire BRUM Music website and identify every place where an icon, generic graphic, emoji, gradient block, or placeholder is being used instead of a real photograph

IMPORTANT TECHNICAL REQUIREMENTS:

- DO NOT redesign the website.
- Only replace elements that are clearly intended to represent photographs or image content.

CONTENT

- Prefer images from Wikimedia Commons / Wikipedia-related public sources.
- I Do not use copyrighted commercial photography with unclear reuse rights.

FALLBACK:

If you cannot find a suitable confidently reusable photograph for a particular placeholder, KEEP THE EXISTING PLACEHOLDER rather than inserting an inaccurate or questionable image.

AI agent - add “About Me”

Prompt for Codex :

Review the existing BRUM Music website first so you understand its current structure, visual style, navigation and conventions. Add a new About Me page to the website. I will provide you with a photograph of me.

IMPORTANT TECHNICAL REQUIREMENTS:

- DO NOT redesign the website.
- Add an About link to the existing navigation using the same style and behaviour as the other navigation links.
- Store the photograph somewhere sensible in the existing project structure, such as assets/images/about/, if that fits the current structure.

CONTENT

- Include: my photograph, my name, my role, a short biography, a way to return to the rest of the website through the existing navigation
- Name: Diego Minaya
- Role: XR Developer
- About: Diego works with interactive experiences & immersive technology

SUMMARY

Distinctive, production-grade frontend interfaces that reject generic AI aesthetics through intentional design choices.

- Guides aesthetic direction selection (brutalist, maximalist, retro-futuristic, luxury, organic, etc.) before implementation to ensure cohesive, memorable designs
- Emphasizes typography, color theming with CSS variables, motion design, spatial composition, and textural details as core design pillars
- Generates working code (HTML/CSS/JS, React, Vue) that matches implementation complexity to the aesthetic vision, from refined minimalism to elaborate maximalism
- Explicitly avoids overused fonts, cliché color schemes, and predictable layouts that characterize generic AI-generated interfaces

SKILL.md

Frontend Design

Approach this as the design lead at a design studio known for giving every client a distinct visual identity that is not mistaken for anyone else's. This client has already rejected proposals that felt cliché or templated, and

  ① index.html
  ① README.md
  > timeline.html

docs > styles.md > # CSS classes and themes
1  # CSS classes and themes
2
3  [css/base.css][../css/base.css] defines the shared layout and components. [css/themes.css][../css/themes.css], loaded second, defines genre-specific overrides and timeline presentation. CSS classes are styling hooks, not JavaScript classes.
4
5  ## Theme attributes and custom properties
6
7  'data-color-theme="light"' or "dark" belongs on the root '<html>' element and controls the global appearance. With the attribute absent, CSS follows 'prefers-color-scheme: light', defaulting to dark otherwise. 'main.js' manages the attribute and saved preference.
8
9  'data-theme="metal|pop|reggae|cosmic"' identifies a genre. Band pages apply it to '<body>'; homepage cards apply it to '.band-card-body'. Custom properties inherit into descendants, so a card body's genre variables do not propagate upward to its parent '.band-card'.
10
11  Key custom properties are:
12
13  - '--bg', '--bg-elevated', '--bg-card', '--text', '--text-muted', '--border': shared surfaces and text colors.
14  - '--accent', '--accent-2': site-wide accents.
15  - '--accent-band', '--accent-band-2', '--band-tint', '--shape-radius': genre-specific values.
16  - '--accent-band-2' is defined but has no current 'var()' consumer.
17  - '--font-display', '--font-body': Big Shoulders Display and Archivo, with local fallback fonts.
18  - '--container': shared maximum content width, currently '72rem'.
19
20  Genre rules control band tints, accents, corners, and selected photo glows. Light-mode overrides change genre tints. The timeline uses explicit genre color classes because its page contains several genres and has no single body theme.
21
22  ## Shared page classes
23
24  - '.container': centered width constraint and horizontal padding.
25  - '.site-header', '.site-logo', '.site-nav': sticky header, branding, and navigation. '.site-nav a[aria-current="page"]' highlights the link marked by JavaScript.
26  - '.theme-toggle', '.theme-toggle-icon': dynamically inserted appearance control and decorative icon. JavaScript requires '.site-header .container' as its insertion point.
27  - '.site-footer': shared attribution/footer layout.
28  - '.skip-link': initially off-screen link revealed on focus; page markup targets '#main'.
29  - '.visually-hidden': utility for visually hiding content without 'display: none'; available for accessible text.
30  - '.btn', '.btn-outline': anchor button styles; use the latter alongside '.btn' for the outlined variant.
31  - '.section', '.section-tight': section spacing; '.eyebrow' and '.lede' style introductory copy ('.lede' is styled under '.hero p').
```

Skills = reusable prompts

Documentation

Benefits:

- **Persistent Context**
- **Prevents Repeated Prompting**
- **Creates a Shared Project Memory**
